nice2have-printer

HTML + CSS · DIN A0 · 841 × 1189 mm

PRINT-READY POSTERS FROM PLAIN HTML

Write HTML. Print A0. Exactly.

nice2have-printer turns one HTML file and one CSS file into an exact DIN A0 PDF – checked, vector-sharp and ready for the print shop. No build step. No npm packages.

One A0 sheet = 2 × A1 = 4 × A2 = 16 × A4

Three steps to print

1. **Write**
   Lay out the content in `index.html`, style it in `canvas.css`. Every size is a multiple of `--u`.
2. **Check**
   `npm run shot` renders a full-size screenshot and reports format, overflow and fonts.
3. **Print**
   `npm run pdf` writes one exact A0 page, ready for the print shop.

```
~/my-poster

$ npm run shot
Format:      841 × 1189 mm OK (A0)
Free space:  Features: 0 mm
Fonts:       Poppins 400 · 500 · 600 · 700
Screenshot:  shot.png (3179 × 4494 px)

$ npm run pdf
PDF:         canvas-a0.pdf
             1 page · 841.0 × 1189.2 mm
```

Exactly A0

841 × 1189 mm on one page. Every export is checked against the format.

Zero dependencies

No `npm install`, no build, no dev server. Just Node 22 and the browser you already have.

Vector-sharp

Text, SVG and CSS stay vector, fonts are embedded. Only photos are pixels.

Catches mistakes

Clipped content, elements past the edge, missing images and fonts – reported before you print.

Any DIN format

A0 to A4, portrait or landscape: change the three values marked `FORMAT`.

Runs everywhere

Windows, macOS and Linux. Finds Chrome, Chromium or Edge on its own – or set `CHROME`.

This poster was made with nice2have-printer. One HTML file, one CSS file, `npm run pdf`.

Node ≥ 22 · Chrome / Edge / Chromium
